2 min read · Oct 11, 2017

We received the results of the audit performed over the LifToken smart contracts last week by Pablo Yabo and Ismael Bejarano, we are pleased with the results, they found critical issues and recommended good fixes and improvements.

You can read the audit performed by Coinfabrik [HERE](#).

Error in MVM Formula

This error has been fixed in this PR

<https://github.com/windingtree/LifToken/pull/271> , now the foundation wont need to wait for the end of the MVM to claim the remaining funds of a period.

Arbitrary calls in token contract

We don't consider this methods a very important part of our token, we are working on smart contracts for hotels solution that will make very good use of this new methods (transferData, approveData and transferDataFrom), we want to allow developers to build more complex applications and we think

that allowing the execution of calls inside transfers and approvals is the best way to do it, we will follow the SmartToken standard that we proposed in Zeppelin Solidity.

Using tx.origin

Fixed in <https://github.com/windingtree/LifToken/pull/280>

Double Spend

Response on this PR <https://github.com/windingtree/LifToken/pull/270>

Required solidity version

Fixed in <https://github.com/windingtree/LifToken/pull/257>

Unassigned result

Fixed in <https://github.com/windingtree/LifToken/pull/223>

Missing Transfer events

Fixed in <https://github.com/windingtree/LifToken/pull/266>

Inconsistent use of contract balance

Fixed in this PR <https://github.com/windingtree/LifToken/pull/258>

Protection for unintended token transfers

We wont take responsibility for all the tokens send to the contract, they can be claimed by anyone since we will allowed the execution of calls in transfer and approval methods.

Complex Finalize

We tested the amount of gas used by `Finalize` method and is not higher than the gas limit, we know that is a high amount of gas needed but the function will be able to be executed on the network.

Missing access methods

Fixed in <https://github.com/windingtree/LifToken/pull/259>

Burn tokens indexed event

Fixed in <https://github.com/windingtree/LifToken/pull/250>
