Winding Tree Token Valuation Update

1 min read · Jan 11, 2018

After a lot of feedback from the community on the price of our tokens we've decided to adjust the exchange rate by x100 for the upcoming Token Generation Event (Feb 1–15, 2018)

Therefore, the new rate for Lif issuance during Token Generation Event will be as follows:

Week 1: 1ETH = 1000 Lif

Week 2: 1 ETH = 900 Lif

All those who participated in the presale will also see their tokens issuance increased by two decimals.

Presale 30%: 1ETH = 1300 Lif

Presale 10%: 1ETH = 1100 Lif

What is the motivation to adjust the exchange rate?

While math-wise the adjustment doesn't change anything, meaning that the price is still arbitrarily set and the market cap is what matters (more on that [here](#)) — we have listened to our community on [Telegram](#) and made the decision to adjust the price in order to eliminate potential hesitation to participate in the Token Generation Event due to the psychologically perceived significance of a high price.

Does this adjustment affect the token sale and distribution model?

Absolutely not. This adjustment doesn't have any impact on the [Market Validation Mechanism](#) which our TGE is based on and it doesn't change the process of how our community will be able to participate in the TGE.

. . .

As always, our team will be happy to answer your questions on [Telegram](#) and we will be publishing a thorough guide on How to Participate in Winding Tree ICO shortly, stay tuned!

Great decision guys! Theoretically it makes no difference, but practically it is true that humans have a huge psychological and habitual valuation behavior based on their past experience. Anything with a high price tag is ultimately associated with... [more](#)
