Non Fungible Tokens in WT

If you are following the crypto space you should have heard about non fungible tokens and if you don't you will find it super interesting.

Whats an NFT (non fungible token)?

Fungible — being something (such as money or a commodity) of such a nature that one part or quantity may be replaced by another equal part or quantity in paying a debt or settling an account. Source: [Merriam-Webster](#)

In a nutshell a fungible token has a total supply of X and the same price for all tokens, but an NFT has a total supply X and it can have a different price for every token, each token is special and has different appreciation.

Why is this so cool?

Lets use a example more related with Winding Tree:

An airline has 1000 flights per year that go between 5 different airports, every flight will have a different price depending the date, weather, political situation of the country, etc.

A non fungible token will be perfect to represent the inventory of this flights and trade it in a super effective way, every flight will have a range price and each seat on it will have a different price depending on the location.

A non fungible flight token can be traded for Lif tokens to anyone in the WT platform.

The seat #8A of the flight #AAA001 from Airport #1 to Airport #3 has a cost of 500 Lif tokens.

The more supported standard for NFT is ERC721, but there is also an implementation for “Distinguishable Assets Registry” (ERC821) written by Esteban Ordano of Decentraland which in our opinion fits better into the domain of the problems that Winding Tree is trying to solve, where we need tokens/assets with a lot of metadata.

With the use of a NFT for airline distribution we would be able to transfer assets and tokens using standards supported by the Ethereum community, ERC20+ERC827 and ERC721/821.

ERC721 — <https://github.com/ethereum/eips/issues/721>

The Anatomy of ERC721 — <https://medium.com/crypto-currently/the-anatomy-of-erc721-e9db77abfc24>

ERC821 — <https://github.com/ethereum/EIPs/issues/821>

CryptoKitties (a popular NFT with collectible kitties) — <https://www.cryptokitties.co/>

If you want to see a super simple example of NFT you can check out a dapp that Ive built in few hours: Tokenizator.

Tokenizer allows the creation of one ERC721 token with extra metadata on chain, that includes name, description and the base64 of the token image in 64x64 px.

Tokenizer Dapp — <https://augustol.github.io/tokenizator/>

Next month we will be traveling to NZ to have a workshop with Air New Zealand and discuss how we can represent airline inventory on chain with non fungible tokens !
