You applied to hack, you checked out Winding Tree API, you're keeping an eye on our news & exciting opportunities we're cooking up for you with our partners. Beautiful, what's next? Time to dive into nuts and bolts!

Check out our proposed hackathon challenges below and if you have your own challenge or use case that you'd like to invite the hackers to work on — consider [joining as a partner](#).

Distributed Storage

Optimize the use of distributed storages for hotel inventory distribution.

Optimize/Improve the use of distributed storages (if possible swarm) on WT solutions. Add the use of swarm provider, we only support one swarm provider for now, we want to support multiple ones as fallback solutions, so in case the main provider is down it will try to get the information from the next on...[More Details](#)

Airline API

Distribute and normalize access to airline's APIs using decentralized networks / services.

We would have an initial implementation of the WT Airline Index ready for the hackathon. The challenge is to improve the presented implementation, present PRs with changes proposals, or build a library to work easily with the WTAirlineIndex contract...[More Details](#)

Implement a solution for the transfer of value and data on a 2nd layer (over the first layer that it would be mainnet), such as state channels, or use an existing solution like Raiden or Liquidity Network to build a scalability solution for N users...**More Details**

Implement a solution to provide signed offers with the rate plans provided by the WT read api, and where these signatures can be verified on chain.
Implement a solution for the crypto booking app where the pricing can be calculated dynamically with the use of different oracles...**More Details**

Implement the registry of ENS(Ethereum Name Service) subdomains for the WTIndex contract, where each hotel and hotel URIs will have their own subdomain ENS...[More Details](#)

Winding Tree is an open platform, but sometimes, you need to make some of your data private. Maybe it's confidential, or maybe it's just not meant to be seen by everybody. With the use of [homomorphic encryption](#), you can transfer the data through the system without the fear of them being decrypted by unauthorized parties while still allowing authorized parties to read them...[More Details](#)

. . .

Each of these official challenges qualify for our special prize during Hacker Awards and we'll be super excited to see even more of open collaboration in

these areas after the hackathon as well. And if you decided to hack your own challenge — fear not, every team at the hackathon will receive equal support and mentorship from Winding Tree technical team and all demos will equally qualify for a number of community choice awards.
