We attended ETHBerlin the past weekend with a group of four people, Jakub Vysoky (CTO), Dave Montali (CIO), Augusto Lemble (Blockchain Architect) and Jiri Chadima (Core Dev). With the primary goal to hack or buidl something that will help Winding Tree and connect with hackers and buidlrs of the new web.

We published ideas to work on during the hackathon Wt Explorer & Crypto Booking, but since we weren't allowed to put any bounty on it due to the low tier of our sponsorship (tier 2 of 5) most of the hackers went for ideas with prizes or more low-level infrastructure.

But this gave us enough time to hack, and Louis Holbrook @nolash, a core dev at Swarm invited us to buidl a decentralized collaborative pong, crazy right?

**You can take a look at the project submission [here](#).**

## **What do we take from ETHBerlin?**

- Excellent connections with projects like Swarm and ENS, looking forward to seeing them in our hackathon on October.
- We experimented with mutability resource updates; this is a new feature that will allow change swarm content dinamically, this is awesome for Winding Tree since it will help us provide dynamic content on our hotel infrastructure without communication with the ethereum blockchain, cheaper and faster :).
- Hours talking with hackers and buidlers of the community, this helps us a lot to understand what we have to deliver, let's remember that Winding Tre is buidling infrastructure solutions for engineers in the travel/blockchain industry, and talking with them to understand their need is one of the essential parts of the process to deliver a good product.

**At last a very big thank you to the ETHBerlin team and the buidlers who were hacking with us!**
