This last week we were able to make great headway on the development of the Winding Tree platform.

You will find that we were able to make progress of adding availability to the Explorer.

Within the wt-fixtures section, we were able to add some useful tools that you can use with the test data. We have a random data generator and a few scripts that can communicate with our API's Take some time to check it out.

Within wt-fixtures we are also used for CRON hotel. This is time-sensitive data, things like ratePlans, availability and cancellation policies. It will change daily to a new set of random values. This way we can ensure that the hotel will always be using current data for price and availability calculations.

We did the initial release of wt-update-api , it can now be used in the playground environment. So anyone testing it will be able to get changes in almost real time for the CRON hotel every day at 10 AM CEST.

Thank you for your continued support and patience! If you have any questions, join our [Telegram](#), technical discussion should go to our [Google Group](#). If you want to contribute, a good place to start is [GitHub](#) or our [upcoming hackathon](#)!
