We have started working with the [Search API](#) (you can see the discussion in our [Google Group](#)). It is meant to work over the existing Read API that allows consumers such as an OTA and hotel aggregators to quickly search the WT Platform for inventory.

We have also started to create a sample booking form that will take shape in our [hotel explorer](#)

Our [React Library](#) is starting to come together. We have based on a wt-ui style and we intend for it to be used across every front-end app in the Winding Tree platform.

We are almost done with our first implementation of the sample booking interface, you can read more about it [here](#).

Thank you for your continued support and patience! If you have any questions, join our [Telegram](#), technical discussion should go to our [Google Group](#). If you want to contribute, a good place to start is [GitHub](#) or our [upcoming hackathon](#)!
