We're stoked to welcome Liquidity Network, off-chain payments hub, to join us at the upcoming hackathon as hackers, mentors and sponsors.

What's especially exciting is Liquidity Network's hackathon challenge that we just announced — with full support from Liquidity Network's blockchain research engineer Thibault Meunier our hackathon participants will be able to work on the free, instant payments solution for Winding Tree platform and earn prizes.

LIQUIDITY · NETWORK

**WINDING
TREE**

We had a chance to ask Thibault a few questions about the future of decentralized world and we're happy to share his vision with Winding Tree community.

Thibault, what are the most exciting developments on the path of decentralized world that you've seen in the last 2 years?

The past two years have seen great developments on the the path to a decentralised world. Crypto has become increasingly mainstream and the wider public knowledge of blockchain increased significantly. The space is no longer restricted to developers and traders.

Most excitingly the developer community which I am proud to be part of has grown in both quality and quantity. Usable applications such as Peepeth and Status are really impressive and are doing an incredible job at making blockchain practical for wider adoption.

What impact can the global community expect from different crypto & blockchain dev communities engaging and collaborating with each other? How do we all benefit?

Engagement and collaboration within the community is a huge force to advance progression, more options, higher standards, improved UX and less fragmentation. All of these are improvements that can be brought about more quickly through collaboration.

Building on top of another product, creating new ones faster and encouraging the creation of usable tools for the users doesn't mean that everyone is doing the same thing or working on the same project, as this obviously wouldn't be beneficial. Developers working together to improve processes is always a positive thing.

What do you see as the main obstacles in moving decentralized software into the mainstream usage?

One of the biggest obstacles I foresee is UX, but companies are aware of this issue and are working on this. Improvements are coming! Increased users will result in this need becoming more critical. A shift will happen not with similar UX as your regular service but with a better more improved version.

Fiat to crypto onboarding, most apps assume the user holds crypto. This is a big issue for adoption as many do not. Lots of fragmentation and lack of interoperability between solutions. On the developer side, it is similar to proprietary phone chargers now moving to usb-c.

How does the blockchain dev scene look like to you in 2 years from now?

In two years we will have established higher standards but still with different implementation regarding the use case.

I do also see a shift towards mobile usage of the technology. For now, the most widespread way to use blockchain is on desktop through Metamask. On mobile, the ecosystem shall be more consistent.

And the experience would be more transparent. Benefitting from improvements provided by blockchain technology would be similar to improvements made in

hardware or concurrent systems. Many users won't be aware of what is happening behind the scenes while they would experience its impact.

Blockchain development would therefore be purely focus on blockchain without proving its capabilities.

What are some of the most valuable benefits that you see in collaborating with organizations like Winding Tree?

Companies would experience benefits from running on the same payment infrastructure and the end user would not be affected by fees accrued from online payments. Companies would know when a ticket is solved and have the cryptographic proof to enforce it.

What's next for Liquidity Network and what's your moonshot vision?

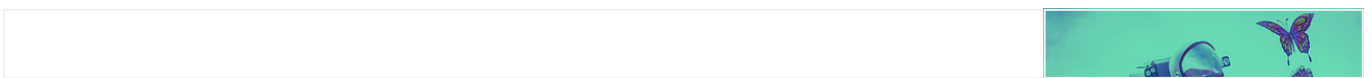

Going forward for Liquidity Network we will see the next generation of DEX launched, no fees, and instant swaps. This is a game changer for swapping between stable coins. When abroad, no more fees associated with conversion between exchanges.

Education is game changer and I am proud to announce that Luzern Hochschule will use the Achievement.Network decentralised education platform from November 18.

. . .

We're looking forward to hacking with Liquidity Network team next week! Check out [off-chain payments challenge](#) and feel free to reach out with questions or comments.

Last but not least — check out our latest hackathon participant's guide:
