More

Here are some of our updates over the last few weeks.

We spent time working hard at moving all of our services from now.sh to Amazon Web Services. This is going to give everyone working and testing in our playground and demo environments a much faster and smoother experience. This will be crucial in allowing newcomers to get a better grasp of what we are building when they are checking out everything that we have to offer on our Github. You can see more on how this will work [here](#).

We finished the Search API which is now deployable in both our demo and playground environments. This will allow those using it to search by location.

We renamed the WT Update API to WT Notification API to reduce confusion amongst users.

During the last few weeks, we have had a lot going on. We ran our own hackathon from 10/24 to 10/25 in Prague leading up to Devcon 4. We are still implementing the feedback and work done at the hackathon and you can expect to hear more about that in the near future.

Thank you for your continued support and patience! If you have any questions, join our [Telegram](#), any technical discussion should go to our [Google Group](#). If you want to contribute, a good place to start is our [GitHub](#).
