In this weeks update, we are happy to share that we have completed the booking portion of the platform. It is finished and merged with everything else. In addition to this, technical changes in the data structure were merged as well. It was quite a bit of work across all of the many repositories.

We separated the algorithms that we use to determine the process and cancellation fees from our Hotel Explorer into a completely separate repository. You can now easily reuse it in other projects, for example, our

[booking API for validation](#). We will have more in-depth documentation on this available shortly.

In the interest of making our platform more usable by ordinary humans please check out our proposal for [ENS integration](#). During our [hackathon](#), Makoto Inoue gave a great introductory talk about Ethereum Name Service. You can learn more about it and check it out [here](#).

We will be doing another environment reset on December 19th. You can read more about it in [this thread](#). All of the new merged features will be deployed to both our Playground and Demo environments on December 19th as well.

Thank you for your continued support and patience! If you have any questions, join our [Telegram](#), any technical discussion should go to our [Google Group](#). If you want to contribute, a good place to start is our [GitHub](#).
