We have continued to update our smart contracts to the latest cutting edge by upgrading to the latest version of zos and other libraries. We have even contributed back to the community the tooling we have been using for our work. Because of this, we have had to delay our planned release of the upgradeable indexes on Ropsten, but this delay will be worth the wait.

Steady progress is being made on the separation of the data model. It is published on the NPM and we have started to integrate the changes in our tooling. There is still some work to do on this, but it is on the right track and

we are making good progress. This will ideally allow us to make much smoother upgrades to the data model in the future.

We are starting to talk about two upcoming interesting features of the platform. [Proving ownership of a hotel](#) and [spam protection in the booking phase](#). If you are interested in that and have suggestions on how it could work please let us know. Your contributions are more than welcome!

We're also actively improving and optimizing our documentation portal — [check it out](#) and feel free to drop us your feedback and suggest more FAQs.

Thank you for your continued support and patience! If you have any questions, join our [Telegram](#), any technical discussion should go to our [Google Group](#). If you want to contribute, a good place to start is our [GitHub](#).
