We have improved the data validation in the Read API by quite a bit. We are now able to support multiple versions of the data format, although in a somewhat limited fashion.

The data model separation and smart contracts upgradeability are finally finished. Therefore we are getting ready for our next platform upgrade which will happen on April 11th.

For the very first time, we will soon be publicly deploying the Winding Tree Index for Airlines so that it can be tested. The support in our tooling is still limited, because we are still looking for the best way of showing these capabilities. We are also moving forward with extensive research and comparison of various NDC implementations.

We are making a lot of progress in the area of spam protection in the booking phase, you can see more info on that proposal here. In the near future, we will start an implementation phase to bring this to fruition.

Do you have something to add or would you like to ask about more details? Join our Telegram, any technical discussion should go to our Google Group. If you want to contribute, a good place to start is our GitHub.
