We have released a new [debugger application](#) that should be a great asset to help out everyone who is starting out with our platform. It is directly connected to our Indices and deployed on Ethereum networks. It will help you to see whether your data was uploaded correctly and if stayed in Swarm or not. If you would like to see more features, please leave your suggestions in [this repository](#).

As a reminder, our next platform upgrade will take place this Thursday, April 11. You can see the details of that in this [Google Group thread](#). The affected APIs are already versioned and released on both [Dockerhub](#) and [NPM](#), so you can play with it before the actual release.

We are still continuing work on the details of spam protection for the platform, the actual implementation should begin fairly soon.

Do you have something to add or would you like to ask about more details? Join our Telegram, any technical discussion should go to our Google Group. If you want to contribute, a good place to start is our GitHub and Developer Portal.
