We have some great news on the spam protection system. We are beginning to get it integrated into our [hotel data distribution](#) and [Read API](#). It's already working, but we just need to run more tests and make the Read API more configurable. We will also have all of this documented in our [developer portal](#) once we have everything ironed out and ready. As [promised](#), it's based on [Ethereum signatures](#) and we have also created a [little tool](#) that should make everybody's life a little easier when they use it.

Lif deposits are also getting fleshed out in greater detail. The code is not yet public as we don't want to cause any confusion by changing a lot of stuff pretty quickly, but we should be ready to publish it in the next week or so.

Do you have something to add or would you like to ask about more details? Join our [Telegram](#), any technical discussion should go to our [Google Group](#). If you want to contribute, a good place to start is our [GitHub](#) and [Developer Portal](#).

Don't forget that we are doing our second hackathon this July in Lisbon. You can learn more about it [here](#).

For some reason the Telegram link isn't working. It says "Sorry, this group is not accessible."
