This week we had to do another round of breaking changes in our smart contracts, but we are hopefully iterating towards the next release. We are also getting a great contribution by Kostysh which brings upgradeable Organization contracts to the platform. There are still some details that aren't working as expected but we are committed to resolving them soon.

Because we are finishing with some big changes, a major part of our workload now lies in refreshing the documentation on our Developer portal.

We are also revamping our tooling and integrations and careful testing is underway.

Do you have something to add or would you like to ask about more details? Join our [Telegram](#), any technical discussion should go to our [Google Group](#). If you want to contribute, a good place to start is our [GitHub](#) and [Developer Portal](#).

Don't forget that we are doing our second hackathon this July in Lisbon. You can learn more about it [here](#). Whether you're a developer or the business side of travel — we'll be collaborating on the business cases and hacks together. Spots are limited and participation is curated, please apply [here](#).
