Our main focus in the last few weeks of June was to get everything ready for our [Lisbon hackathon](#). The most visible outcome is a lot of new content on the [Developer portal](#) regarding ORG.ID and Trust clues. The hackathon itself was great, we met a ton of new people and got some great submissions. We'll be publishing an official recap shortly!

When we got back, it was straight back to work. We fixed a few bugs discovered in Portugal, and started to [finish everything](#) that we weren't able

to do before the hackathon. We are also slowly adopting some of the hackathon outcomes, such as [DNS trust clue](#) and [ORG.ID explorer](#).

We are finishing up a few missing core features. One is [ORG.JSON hash present](#) in the smart contract as a protection against tampering with its contents. The other thing we need to fix is how the LIF deposit worked. It will be changed so [LIFs are tied to ORG.ID](#) and not to an arbitrary account.

Do you have something to add or would you like to ask about more details? Join our [Telegram](#), any technical discussion should go to our [Google Group](#). If you want to contribute, a good place to start is our [GitHub](#) and [Developer Portal](#).
