With our recent changes regarding the ORG.JSON hash made it to the [JavaScript library](#) and subsequently to [Read API](#) and [Write API](#). It was, unfortunately, necessary to do a breaking change in all of the off-chain adapters (there's no JSON deserialization anymore), but this will be a superior, efficient and cleaner design going forward.

Our focus is now on testing everything and making sure that all of this work nicely in order to have the next release ready by early August. To keep the hacks alive for a few more weeks, we decided to not upgrade the Lisbon

environment (even though we could), but to create a new one instead. Stay tuned for the announcement blogpost and updated [developer portal](#) on those updates.

Do you have something to add or would you like to ask about more details? Join our [Telegram](#), any technical discussion should go to our [Google Group](#). If you want to contribute, a good place to start is our [GitHub](#) and [Developer Portal](#).
