Whether you're an OTA, hotel, software vendor or an independent travel tech expert — we got you covered with **great ideas** that we have designed for our technical hackathon participants! With these challenges you don't have to start from a blank slate — every challenge in the list supports a **real world industry use case** and is based on **Winding Tree platform newest capabilities** which we will be discussing more at the hackathon.

This year our team will be \$5000 in prizes to teams for the best execution of one of these challenges. Those prizes work out as follows:

- \$2500 to 1st place
- \$1500 to 2nd place
- \$1000 to 3rd place

Of course, every team is welcome to work on their own ideas and company needs, but our base requirements for the teams are no more than 5 developers per team to keep it fair for everyone (if you have more than 5 — split into a separate team) and all submissions must be **open source**. In terms of forming teams — you're welcome to team up with others around an idea or a challenge, join another team or join us as an existing company team. For reference, check out what teams picked to work on last year in [Lisbon](#) & [Prague](#) at our past hackathons.

If you're new to smart contracts and distribution on blockchain, not to worry we will have a crash course on these topics to help get you up to speed. Our team will make sure you're up to date on all things decentralized, smart contracts, public blockchains, etc.

Review some of the suggested ideas for challenges below to get an idea of what you can work on. Remember you are welcome to work on whatever you like though.

Lif Token Settlement: One of the biggest issues of cryptocurrencies is how to ensure the price stability for a period of time, multiple parties can agree in an exchange of services for LIF at a certain price and the LIF/ETH price can change drastically during the agreement. There are some interesting tokens like DAI and Tether that can be attached and use with LIF in order to ensure that the price of the token will be attached to USD or EUR.

Additional Trust Clues: Creating additional trust clue deposit allows organizations to stake LIF tokens in their organizations, the more the stake the more they can be trusted in the platform, but is this enough? Or caan we increase trustworthiness in the platform with other possible methods?

Trusted Data Exchanges: Winding Tree finally offers all the necessary tools in the WT platform to exchange data and verify it, the org ids can share information safely and in a decentralized way, the next step where WT is heading is ensuring that all the “extra” communication from bookings, payments, B2B agreements can be cryptography verified. How would you use the current tools to verify private data exchanged between organizations registered in WT?

What else? Here are some additional jumping off points you might want to consider to work on.

- Using decentralized identities in the travel space
- Signed messages with org-id as a proof of ownership, access, etc
- Additional off chain verification for on chain identities (proof of trust)
- A decentralized application (dapp) for booking, metasearch, etc
- Easy packaging of inventory from Winding Tree

- Creating smart contracts for negotiated prices
- Creating more interfaces for winding tree data
- Converting various data formats to a canonical one

Remember you can ultimately work on whatever you like. These are just some suggested ideas to help get the imagination moving.

If you have not signed up yet, spots are limited and going fast. Feel free to sign up [here](#) and you can read more about the hackathon [here](#). Remember approved hackers are free and approved tickets gains you entrance to World Travel Market at no additional cost as well.

Can't wait to see you there!
