Here are our highlights from 2019— platform development, new partners, community building and more.

Platform Development

In 2019 we spent a lot of time moving things forward and perfecting some of the work we had already done.

- We started out with fleshing out our airline proof of concept, greatly improving our booking API, opened up the airline index via API, tested and built out data validation.
- We streamlined our hotel explorer so that it was easier to deploy in different environments, completed a new version of Winding Tree contracts with the ZeppelinOS library, and delivered on the very sought after feature to register hotels via URI.
- We theorized and created a means of spam protection for bookings and proving ownership of hotels. Created more protection for booking

requests,

- We created extensive documentation for developers, created a debugger tool, finalized the Lif deposit. Started building out a number of features for our Org.ID project, and did loads of loads of testing and bug fixes along the way as well.

Partners

- We partnered with Etihad Airways and Airport Basel Hotel to drive innovation forward.
- Our partners Airline Hahn Air issued its first ticket on the blockchain.
- Our partner Nordic Choice Hotel completed their first-ever booking with the Winding Tree platform.
- Organized and led industry round tables and led in-depth partner workshops to exchange expertise and ideas.

Community

- In July, we hosted our 2nd Hackathon in Lisbon, Portugal. We had a great turnout with many developers, corporate partners, and other interested groups attend to come up with some great ideas.
- At our Lisbon hackathon, we tried something new and had a business hackathon, that turned out some really interesting ideas and applications of our technology.
- Later In November we teamed up with World Travel Market and hosted another Hackathon in London. We had three really great submissions that were innovative and insightful leaps forward with our existing tech stack.

Events & Acknowledgements

- We didn't slow down in 2019 when it comes to events, we visited and spoke at numerous events around the globe such as Aracon in Berlin,

Germany, The Hamburg Aviation Conference, The Netherlands Business Travel Conference, BTO11 in Italy, BlockchainUA in Ukraine, the 2nd Future Blockchain Summit in Dubai, ZurichPlUs 2019 in Germany, the New Baltic Hospitality Forum in Estonia, the Travel, Transportation and Hospitality Americas Symposium 2019 in New York, Business Travel Solution Camp in Germany, The Future Of Flying Founders Forum in London, and Hicon 2019 in Italy.

- We also had the fantastic opportunity to present and compete in the Future of Flying Founders Forum where we eventually got to pitch Winding Tree on an airplane as a semi-finalist.
- Winding Tree was covered extensively in various publications such as the Financial Times, Investing.com, Forbes, CoinTelegraph, Fox Business, Phocuswire, Skift, and others.

Looking Forward

What can you expect in 2020? Just as we have in the past we will continue to be busy this year. We have many exciting events coming up that we will be speaking and presenting at to spread the good word of Winding Tree. We will announce those arrangements are finalized and we move closer to those dates.

The following are some of the areas we are planning to focus our time in terms of development.

Q1

- We are going to be focusing a lot of our efforts on getting Org ID ready and making it more user-friendly.
- Some things you can expect to see are a more robust user interface, simplifying onboarding for any party at any organization and automating or simplifying as much of that as possible.

- In the past, we have spent a lot of time getting our backend software fine-tuned and polished. Q2 will be about getting the front-end of things launched and on the same level.
- Making all of Winding Tree software and its products more user-friendly and accessible.

Make sure you’re subscribed to our [community newsletter](#) to stay in the loop about upcoming announcements and events. As always, your feedback and thoughts are very welcome — drop us a line in [Telegram](#), talk to our developer team on [Gitter](#) and join our platform discussions on [GG](#).
