We are happy to be bringing back our development posts to give you a bit more insight and updates on what we are up to on the development side.

Given that some of these updates are happening on private repositories, the actual code being worked on won't be available to be viewed. But we still want to let you know where things are progressing

- We are working on finalizing some UX changes to be made in the very near future.
- We discovered some issues with self-hosting organization editing and are working to correct those.

Upcoming OTA

- We are finalizing some automated testing that we are doing on our API to ensure that everything is working exactly as expected.
- Some of our team is working to develop additional documentation for different aspects of the OTA.
- Our UX team is reviewing everything as a whole to ensure it works well for end-users.
- We are adding some finishing touches to our SeatMap integrations and hope to have that done in the next day or so.
- There are some updates being made to the database architecture that we are making to better accommodate hotel information.
