158

Here is the latest on the development of various Winding Tree products. In general, we are very close to the finish line for both products being fully launched in production.

Arbor

- We have temporarily removed some social media integration functionality for trust verification due to some intricacies with their respective APIs. They will be restored in the near future after we have completed a more thorough review of them.
- We continue to add some final polishing for design and functionality.
- We are nearly done with some work agent key validations. This should be completed by the end of the week.
- Arbor is very close to being completed. Once it is it will be taken out of maintenance mode and launched to the public.

OTA

- We have resolved a few outstanding bugs with fare families, hotel currencies, and tickets.
- Some formatting issues existed with phone number formats on passenger details that have been resolved.
- We are continuing to do end to end testing to locate any outstanding issues or bugs on both web and mobile views that we may have missed.
- We are beginning to move the OTA to production.

Please keep in mind that the majority of the development we are currently engaged in is on our private Winding Tree repositories and development activity won't be visible on these in our Github.

We have an exciting [free webinar](#) coming up on July 1st with PhocusWire. Don't miss out on hearing about the first truly open-source decentralized marketplace built on Ethereum. You can register to join [here](#)

Sign up to our newsletter to stay up-to-date with the latest. We have many exciting announcements coming in the next few months!
