How to Set up Your Company's Unique ORGiD

(Please note: Setting up an ORGiD requires making a single Ethereum transaction on behalf of your organization. You may also need to change the file structure of your company website, should you choose that as a verification method. Read on to learn more.)

In the digital age, it's hard to always know who you are talking with. That's why we created ORGiD Bot. With his help, you can protect your business and your customers by giving them a way to verify users on-the-go. ORGiD Bot helps you weed out scammers and keeps you talking with real people.

In the steps below, I'll guide you through setting up your company's own ORGiD so that people can use ORGiD Bot to verify your identity. Once you've done this, anyone trying to impersonate you can be caught red-handed.

First, go to this [web page](#). You will find a screen that looks like this.

Connect your wallet

You need to have an Ethereum wallet to sign in

Connect MetaMask

Connect Portis

You can select a MetaMask or Portis wallet to create your ORGiD.

After you have connected your wallet, select the “Register New Company” button.

That will take you to a new page where you can enter your company information. Make sure to fill out as many fields as possible. The more information you add, the more difficult it becomes for scammers to copy your identity.

Then you will see a prompt asking you about decentralized storage options. Currently, we offer the option to do so via IPFS. Keep a lookout for new storage options in the future.

Save the transaction and it'll be stored on the blockchain, making your ORGiD live. If you are carrying a sufficient amount of Ethereum that screen will look like this:

If you don't have enough Ethereum in your wallet or don't know how to get some, not to worry! We've covered that as well. In such a case, just click the "Use Payment Card" to purchase some Ethereum and complete the transaction.

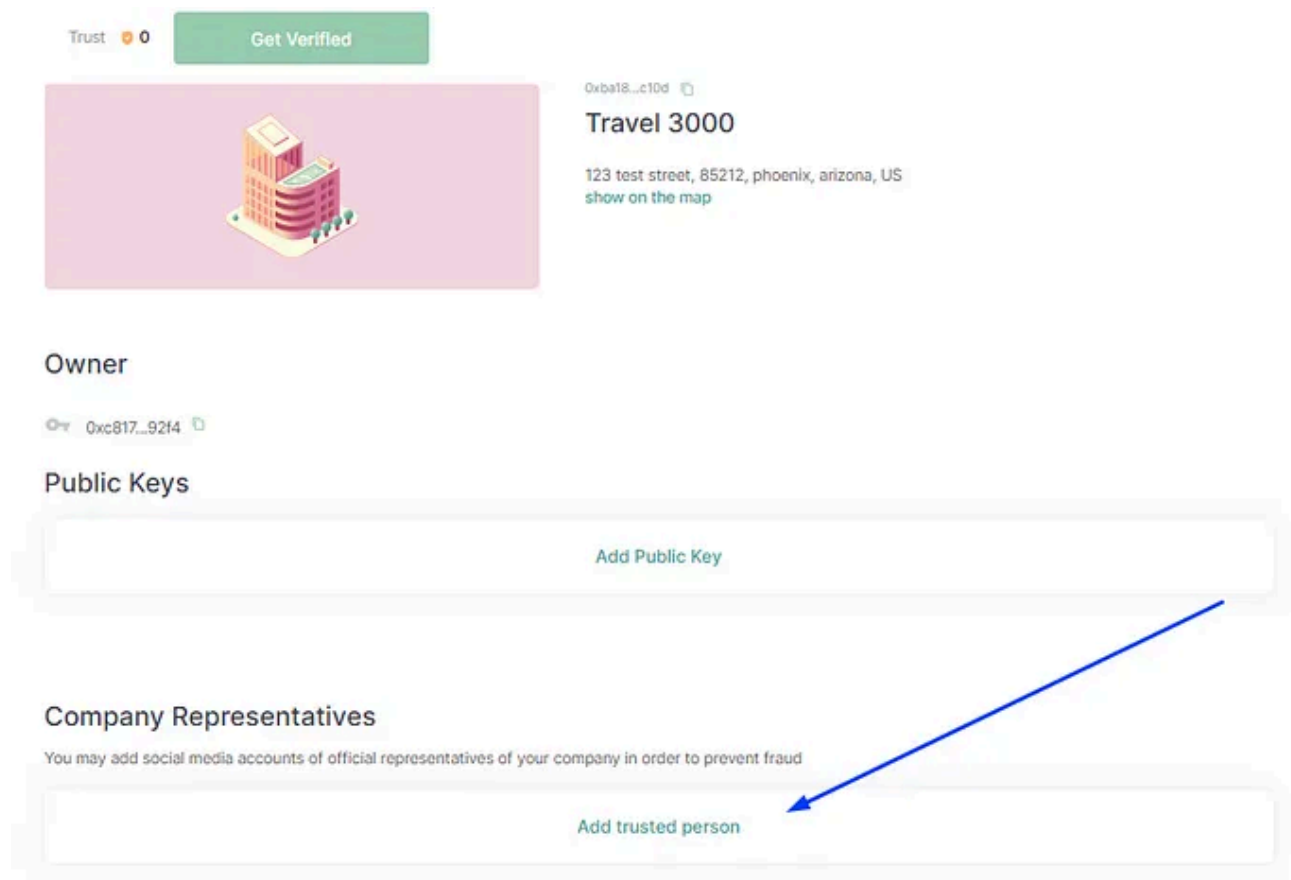

(Please note that Ethereum gas fees fluctuate and often can see dramatic dips up and down in cost. Its worth checking multiple times to get better gas fees.)

Once completed your "My Companies" page will look like something like this:

Add a trusted representative

One of the most powerful applications of ORGiD is for an organization to be able to dictate who actually represents their company and can speak on its behalf.

To add trusted representatives to your company just select the “Add Trusted Person” Under the Company Representatives.

The screenshot displays the ORGiD interface for a company profile. At the top, there is a 'Trust' score of 0 and a green 'Get Verified' button. Below this is a pink box containing a 3D building icon. To the right of the icon, the company name 'Travel 3000' is listed, along with its address '123 test street, 85212, phoenix, arizona, US' and a link to 'show on the map'. The 'Owner' section shows a key icon and the address '0xc817...92f4'. The 'Public Keys' section has a button labeled 'Add Public Key'. The 'Company Representatives' section includes a sub-header 'You may add social media accounts of official representatives of your company in order to prevent fraud' and a button labeled 'Add trusted person'. A blue arrow points to the 'Add trusted person' button.

In the popup window, add their name and select the account type you want to add.

After you click the add button just add the appropriate handle or account identifier to associate those with the representative's record. Then click the sign button when you are ready to add them.

You will then see a popup from your Portis or Metamask wallet prompting you to confirm that you are signing the transaction. Once you have done that you will be able to see that the company representative has been added on your company dashboard.

If the person were to ever leave your company or, for whatever reason, no longer speaks on its behalf, you can remove them at any time by selecting the remove person option.

LIF Staking for verification

A crucial step in fully verifying your ORGiD is LIF staking. Staking is an authentication mechanism to help protect your organization from pretenders and would-be fraudsters. To be considered a legitimate staked organization you need to stake 1000 LIF tokens. This shows that you are a serious organization in the Winding Tree ecosystem. It also creates a financial barrier between you and would-be fraudsters from pretending to be you, making phishing much more expensive on their end. In the future, LIF staking will also make you discoverable in Winding Tree's curated directories.

Please note that you may withdraw your LIF stake at any time. You never actually spend those tokens. However, retrieving your stake does invalidate your LIF stake. Organizations that have a valid LIF stake will show as valid when queried by the [ORGiD Bot](#). You can see what that will look like below.

Staking LIF

We have made Staking LIF as easy as possible for you. To do so, first select the “LIF Stake” option on your company profiles page.

You will need the LIF token to complete this transaction. If you do not have any, you can get the LIF token on Uniswap. There's more information and steps on how to get that [here](#).

Once you have your LIF token, you will need to click the “Allow Deposit” button. Your Metamask or Portis wallet will create a popup to confirm the transaction. After confirming it you will then need to click the “Make Deposit” button. Which will then confirm the transaction and stake your LIF tokens. Once the transaction is complete, it will become part of the blockchain and organizations like yours will show up as verified in ORGiD Bot.

Website Verification

Verifying your website is an important way to demonstrate that you really are the organization or person that you say you are. This can be done fairly easily by following the steps below. First, you will need to log in to your ORGiD account and select the company in question. Next, select the “Connect company website” link.

Next you will see a popup like this:

(This step might get a little complex. Please keep in mind that you will need someone who can make changes to your website's file structure.)

Next, take that long string of numbers and letters and copy it into a .txt file. We recommend naming the file orgid.txt, but you don't have to. Then just take that ORGiD address, save it in the file, and upload it to your site directory. Then take the link and paste it into that web address field and click save.

Then click the “Save to ORG.JSON” button to save the verification. If you have multiple verifications to make, we recommend doing them all at the same time to avoid multiple Ethereum gas fees when transacting with the Ethereum network.

Once your ORGiD is complete, ORGiD Bot can verify Telegram users as part of your organization, or expose scammers who try to copy your identity!
