5

Greetings,

We are pleased to present our latest progress report on the development of the Minimum Viable Product (MVP) for February 2024.

Completed Tasks:

- **SDK:** Over the course of the month, we addressed several issues within our software development kit (SDK) through a series of 12 minor releases, marking significant strides in its stability and functionality.
- **User Management:** Through meticulous effort, we successfully implemented robust user management functionalities using both the Node.js API and the corresponding UI on the Node.js Dapp, enhancing the platform's usability and accessibility.
- **UI Consistency:** A paramount focus was placed on ensuring a consistent user interface experience across all Dapp applications, fostering a

cohesive and intuitive user journey.

MVP Deployment Preparation:

- In preparation for the forthcoming deployment, we meticulously refactored the initialization and configuration processes of environment variables across all applications, streamlining their setup and management.
- We developed specialized configuration and deployment tools (scripts) tailored specifically for the MVP host environment, facilitating a smooth and efficient deployment process.
- The initial setup of the MVP host environment has been successfully completed, laying a solid foundation for the imminent deployment phase.

Next Steps:

As we move forward, our primary focus will center on the deployment of the MVP applications and thorough testing within the production host environment. Anticipated milestones include the release of the MVP server alongside comprehensive documentation tailored for both developers and end users.

We remain committed to delivering a high-quality MVP that meets the needs and expectations of our stakeholders, and we are excited about the progress made thus far.
